### Equipment Supplied

Helmet

### Suggested Items

Ski Clothing -Jacket, hat, gloves, ski trousers

### Numbers

One person / flight

### Safety

Safety in a microlight is at its' greatest during the winter. Should motor failure occur, a microlight simply becomes a precise and manoeuvrable two-seater hang-glider. The snow and stable air mass are a microlight's natural allies.

Where national organisations maintain high design, construction and maintenance standards, microlights have an excellent safety record. Microlights are simple enough that pilots themselves can carry out all maintenance.

### Equipment Spec.

A microlight is a simple, light-weight aeroplane which can carry a maximum of two people, take off and land in a very short space (usually less than 100m), is cheap to maintain and operate, and, most important of all, enormous fun to fly.

Powered by simple two stroke engines providing high power at low weight and cost
